Comes v. Microsoft

Issues to talk thru w/ Lloyd

- UI needs of pens
- obj-oriented basic as GOTALK
- windows compattibility layer
- way nSoft structures Apps
 - ↳ obj-oriented is structured
- port p code to GO machine
- persistent objs - would be valuable to talk through
Mark Zippokurst: so GO can speak nSoft's obj-ese

AMANO

Microsoft obj oriented stuff

obj oriented stuff
 ↳ genius discussing
 ↳ prototyping

apps structure:

SDM - structured dialogue mgr
 "SB" mgr - seg mgr - "segment base"
 local
 pcode
 symbolic debugger
 Mirrors - windows to PM kit
 Windows I/F
 ↳ lots of bugs here in locking & deref big handles

C# - global symbol cache
 ↳ integrated programming env - pulls syms etc. into smart prog. + editing

Will p-code die out? Not so long as Windows is big mkt
 ↳ Charles did it

App FW group: building lots of objects { buttons } factory is
 { menus } stuff to plug the together

Nick Kausan
 PM guys are doing lots of obj oriented stuff w/ IBM
 are eyeing over tech. stuff - class hierarchy multiple inherits etc.

Old Apps

How all this maps back to Windows is unclear now,
but has got to.

Obj Basic

It's clear they need to do this soon is so they can
get ObjB a control lang., not IBM's REXX

Apps:

they need to get apps to PM desperately to help it self
Excel still has to work real real hard
to get from Win to PM, & they're interesting

New apps will use obj oriented kits

Obj-O Basic

└ goal is for it to be cross app control lang
└ and

embedded basic (in Omega) is 130k

Should GO license sys slw to other HW vendors?

Key soft concern is that any apps they write will run on all NB platforms

Next Steps

- 1) LF to spend more days @ GO to sock up GO tech
 - evaluate what it means to write app for GOOSE (in comparison other potential pen based environments).

- 2) → Obj-oriented Basic
 - attributed - file system
 - ↳ obj-oriented fw
 - ↳ persistent obj database
 - prot. mode Windows 3
