CONFIDENTIAL

sounds like a great idea. We should see if we can just give the DOS mktg people a list of names and make them do the shipping, etc.

I had planned to send MS DOS 5.0 to these people. The DOS Marketing guys know that we might on a limited basis. What do you think?

For beta testers that report problems w/ DR DOS and 3.1:

DR-DOS is an untested and therefore unsupported operating system. MS-DOS (or OEM versions of it) is required for Windows. Using DR-DOS with Microsoft Windows is at the sole risk of the user. We don't support it.

|| | Jamine,
|| | What should I tell these Dr. DOS people, if anything.
|| | Thanks

|| | To: all

|| | Has anyone had any luck installing Win 3.1 under DR DOS 6.0? I get an
|| | error as disk # 2 then get dumped to dos with the message:
|| | Standard Mode: Protected Mode tapping error.

|| | There is 1 Reply.

|| | I've got the same problem with DR DOS 5.0. Unfortunately, that's all
|| | the info I have...it still doesn't work. I reported the problem and
|| | have been trying different things, although nothing has worked yet.
|| | I'll let you know if I ever get it to work.
