January 20, 1992

Dear Mr. Trustman,

I am returning the copy of DR DOS 6.0 you were so kind to let us evaluate. Unfortunately, at this time we will not be able to upgrade.

We were impressed with the many additional features supplied with DR DOS, many which we felt MS-DOS should have included in previous releases before. The reasons we will not be making a purchase are threefold. First, our corporation has decided upon MS-DOS 5.0 as the corporate standard. Secondly, the current economic climate discourages us from making purchases not currently in the budget. What I feel is the most important factor however, is the rift developing between Digital Research and Microsoft. By this I mean Microsoft not allowing you to beta test Windows 3.1. Since the users who would be most inclined to switch to DR DOS are also using Windows, this one factor is of particular concern.

I apologize for any inconvenience we may have caused. We do appreciate you taking the time to try and work with us on this. Thank you.

Sincerely,

Scott Eckert
