PC Mag is asking IBM for the same for Windows 3.1.

So, if we don't respond we run the risk that they come out with an article extolling the virtues of OS/2 "crash protection" while describing Windows as not quite ready for important applications/data.

Does anyone know where one of these can be found?

PC Mag wants an app to crash OS/2 for their Windows 3.1 vs OS/2 review. We'd love to oblige them... I know steveb showed one about a year ago on press tour, but he's not responding.

thanks,
jeff
