we can doc the api's we know the apps group (and other isv's) use. we can doc the api's we know the apps group (and other isv's) use.	
we can doc the api's we know the apps group (and other isv's) use. we can doc the api's we know the apps group (and other isv's) use. this is a good practice, though it's not as stragilithforward this is a good practice of the calls depend on context and an understanding	
this is a good practice. though it's not as straightforward this is a good practice. though it's not as straightforward an understanding as it appears, since some of the calls depend on context and an understanding as it appears, since some of the calls depend on context and an understanding as it appears, since some of the calls depend on context and an understanding	
as it appears, since some of the calls depend on context and an understanding of the source, which is explained in detail in mail i forwarded from	
david d'souza.	
1 - Ala congrating	
the biggest advantage our apps group has is access to the operating systems source, as long as this continues, the issue will never	
systems sourceas long as this continues, the laboration of the systems sourceas	
go away.	
in fact, jimall has long been assuming that the apps group did not in fact, jimall has long been telling isy's this, too. when	
in fact, jimall has long been assuming that the apps group the net in fact, jimall has long been assuming that the apps group the net have source access. he has been telling isv's this, too. when have source access. he has been telling isv's this, too. when	••••
have source access. he has been telling isvs this, been telling isvs that, it told him yesterday that this was not the case, he had that	
"oh chit" look on his lace	
the source it's a matter	
the apps group does not need access to the source. It is the fact that other companies that they have grown accustomed to it. the fact that other companies that they have grown accustomed to it.	
that they have grown accustomed to arreducts (eg. Borland
