To whom it may concern:

Below is the text of 2 messages sent previously regarding header files and libraries for implementing a Windows 95 Password Provider. To date, we have had no response, but we still need this information. Can someone please respond with the information we need?

Thanks,

Todd Millett

****
****

We have the 950 DDK, and in the network.doc file, located on that CD, these same constants are mentioned, as are the API's we need to implement: PPGetPasswordStatus and PPChangePassword. There is a whole chapter (Chapter 6) on this subject, which contains the same information that was in the "Utilizing the Windows 95 Password Control Panel" doc.
It is also well documented in the NETWORK.HLP file on the DDK CD.

In short, we have everything but the headers and libraries to actually implement this functionality. If these constants and API's have been removed, why are they so well documented? Also, if they have been removed, how do we integrated password changes with Windows 95?

Any help would be appreciated.

Thanks,

Todd Millett

I believe the constants PS_ONOFF, PWDCHANGE_MASTERPWD_NOTIFY have been
  removed as well as the APIs you are referring about. The document   "Utilizing the Windows 95 password has not been updated yet.
Also you'll find the latest files in the 950 DDK that we sent to
Novell   last week. However, I'll make sure you receive the updated version of the document on how to the Windows 95 password.

Thanks
Yves Michali

Subject:   Password Provider constants
```

CONFIDENTIAL

We are trying to implement a Windows 95 password provider for our
NetWare   client. We have the document "Utilizing the Windows 95 Password Control
Panel",   which documents the API's we need to support. However, we can't find the
various   constants which are referenced (such as PS_ONOFF,
PWDCHANGE_MASTERPWD_NOTIFY), nor the API's themselves, referenced in any header file
we have. We have looked in
NETSFI.H and
NETMPR.H, but they are not there.

Could you please direct us to the proper header and library we should be   using for
these calls, or send them if they are not included in the standard SDK or DDK?

Thanks,
