Subject: Client32 Beta 1 issue

This is a brief note to inform you of a possible delay with Client32 Beta 1.

Issue: There may be a possible delay with Beta 1, due to a compatibility problem between Windows 95 gold code, and Client32.

Fidelity Investments notified Novell yesterday that after installing the "released code" version of Windows 95, Novell's Windows 95 (Alpha II) client no longer functioned. Engineering's latest available version of Windows 95 is BUILD950.RC4 (Build 950, release candidate 4). Fidelity has a later version that RC4, which does not function with the client.

Richard Jones has made multiple attempts to obtain the latest code from both John Ludwig and Yves Mitchell <sp> at Microsoft, but his messages have not yet been returned.

Engineering will obtain a version RC6 (release candidate 6) on Thursday 8/10, and will begin testing with this version to identify the incompatibility. Engineering will also contact Fidelity to verify that the version they are seeing problems with is RC6.

If the issue cannot be readily identified and resolved, then the Beta 1 date could be negatively impacted.

I will post you with a status of this issue Friday Morning.
