There is nothing that can be done at this point but it sure looks to
me like wingz 1.0 is faster than their beta was and pretty fast on
a lot of things compared to excel. Our .980 version looks like garbage
on exponentiation and is slow in general. I am suprised file load
and macros are so much slower than excel 1.5. I suppose people have
worked on these as best they can. (i mean .980 looks bad comapred
to .960)
