Subject: Include NS PlugIN in the SDK update
Importance: High

Hi, just spoke with Kevin, he liked the idea to use SDK update as the release and redistribution vehicle for NS Plugin support, so I have created the project under SDK-java\NSPlugin Support to include the npmsjava.dll, Kevin will do up a reame.txt and check in the same directory to give people instructions on how to use it.

This should happen quickly. We plan to get the SDK build this week, and put out on the web before the holiday.

Don, I will update the release note to mention this piece, also David Sobeski has a doc developed that is on the VSS tree related to this dll, but has a lot more information related to the VM, I am think to add the Plugin support part as part of the SDK doc update.

Kory, once we had the testing sign off on both VM and PlugIn dll, we should get the SDK build for testing.

Kevin, if I missed anything, let me know, especially if there is anything in the license that we need to add. I will add this to the redistribution list.
