I've been trading phone calls with Paul for the past week, but we've never actually talked to each other.

I told paul gross that we are planning to license the debug kernel and talk to jody snodgrass for details. jody told him that we would license to borland for basically distributor prices (\$99).

I at no time told him any terms of the license.

As you probably already know, Philippe Kahn has scheduled a phone conversation with Billy late this afternoon to discuss what Kahn's admin referred to as "litigation." On the chance that his complaint involves the Windows debugging kernel, I'd like to confirm what has happened on that front since May 28. Brad, do you recall exactly what you told Paul Gross about MS licensing Borland the debugging kernel on May 28? Has anyone other than Petermi had any conversations with Borland about this since then? If so, what was said?

Thanks for your help with this.
