There is no loadhi vxd available for Win31 because that functionality has been built directly into VMM. The old vxd should detect this and not load on a 3.1 system, which is how it should be. So, it's hard to say what problem they are having...

I do know that there were problems with ODM in this area, but I'm not privy to that information...

Hey dude,

A few months ago Neil helped DR with a Loadhi problem with Windows. Well, they got everything working for 3.0 but now they say they break in 3.1. Can you find out if there's a new Loadhi we can ship?

Thanks,  
Steve

OK, it sounded like you were referring to a follow up meeting on schedules.

Have you met Mack McCouley yet? He's a great guy and will help a lot. I'll bring him by to meet you.

We are not going to support DRI in the future either. Windows works on MS-DOS and PC-DOS 3.1 and above.

the dos 3 upgrade accounted for 34% of the your June sell through and you can't find time on the agenda for it??? weird.

we've already produced documents that discuss the competitive situation with ibm and dri, and your sales people have already been given it. everyone knows that face to face works better than documents.

The agenda is as usual jam packed. I have asked Rich to look at it one more time. We will sell the units... with or without the session. What we need is a good white paper that explains going against both IBM DOS and DR DOS.

If we can find time at the MSM, I would be happy to get you on the agenda.
