My understanding from Yuan is that he has all the information he needs to handle audio and video. He hasn't looked into other stream types yet.

We still haven't gotten the Stream interface that MS promised at the meeting. Yuan works around that by continuing to use the HTTP server thread method within the new WMP7 filter framework that he's constructed. So far that's fine, but I'd still like to have what they promised us to see if it's better....

He claims he'll be able to hand-off the code to us for the first-cut as early as next week.

Brad

Let's talk in Engineering before we reply to Mike.

Thanks.

June

**Subject:** Status of WMP-7

Hi,

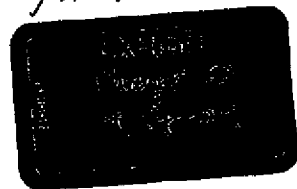

I have not been receiving the Windows Media updates since I transferred the messages to go to Brad. I know we don't have a major effort going, but I would like to be sure of where we are. My question is: do we have a handle on writing a bridge for WMP-7, or do we still need more info from Microsoft?

Thanks,  
Mike
