

Can't setup from B: or Network  
Floppy setup only allows user to install to A:  
Poor config.sys and autoexec.bat file parsing.  
Uninstall doesn't remove everything (some misc files left around).

3) Anything you like about DR-DOS that we should add to future MS-DOS versions

Nope

4) Any general comments.

The following list is all the installation program does:  
Sys the drive w/ DR 6.0.  
Copy all the appropriate files.  
Set up config.sys and autoexec.bat files (not very well)

It doesn't seem to be modifying the MBR at all. I will be checking this out. This may cause problems in that 1/10 systems didn't reboot when we followed this procedure.

don't know if you've been following the past few days, but in the past two days we've shipped 33,000 units of domestic retail windows, 2750 units of doswin bundles, and 6000 units to IBM acis.

This brings our mtd total to 87,000 units plus 12,000 for IBM acis.

We have a good shot at breaking our big July sales of 104K units.

Over the past 4 months we've averaged 82K units/month at retail, (not counting IBM's ACIS sales).

Subject: New Line Of Epson 24-pin Printers  
Date: Thu Sep 19 17:19:05 1991

ISSUE: Do We Add Support For New Epson Dot-Matrix Models?

Epson is in the process of replacing their current line of 24-pin printers with a new set of printers that use a new printer language called ESCP2. These new printers have a new compression capability which makes printing TrueType fonts close to speed to using device fonts. They have introduced 4 new models so far: LQ-570, 870, 1070, 1170. Epson reports that these printers have been well received and all production until end of year has been sold already. The printer provides scalable fonts for DOS applications. Epson agrees with us that we do NOT need to support the device fonts because of TrueType. Epson is still the leading dot matrix vendor.

Development work to add mini-driver support: 2 days (LinS)  
Testing Hit: 2 weeks (KoryS)  
Disk Hit: est. 6k compressed

I recommend that we go ahead and get this done by Beta 3.
