craige owns this for dev. i imagine some combo of mikebeck and chaddk need to help.

we need an airtight description of what compatible content is and need to reflect this is all relevant licensing.

this is a very high priority issue.. we must get this right.

**Subject:** RE: MSAudio - extra interface required

Agree that we should not add features to support this effort to create an incompatibility of content formatted using our technologies. We clearly need to think these scenarios through in greater depth and write a clear \*internal\* position paper so we can all be sure we're on the same page.

Owner of this would be GregCa for marketing (he's on vaca this week and most of next week though).
