**Subject:** FW: Migration Tool - Top 10 MovingVan Comments for Whistler

And you should try the Office settings store tool sometime (link below)...pretty fast...though they don't seem to use Passport...but they do of course mail you the account when you forget it...;-)

And in Napster. .adv search does have bit rate option and other techy things...quality still hit or miss though. Go figure Doesn't work on Whistler personal since some change required for drmclicn.dll and looks like in the install they try to redist a version of it and WFP protected. Works fine on Win2K pro oddly enough.

If I understand the home install path. .we are having people install clean in a new folder, until we have uninstall support in the product?

Should also highlight people to use the migration wizard...if you could call it that...

**Subject:** Migration Tool - Top 10 MovingVan Comments for Whistler

Something I think that was missed in here...

**"Have migration tool use online mechanisms..." ;:-)**

I ran the migration tool in personal recently and I was quite suprised we weren't using something like:  
<http://officeupdate.microsoft.com/info/drivewayquicklink.htm> for files or  
<http://officeupdate.microsoft.com/2000/downloadDetails/o2ksmsdd.htm> for settings

It's true for settings maybe floppy works best until you get your ISP setup again...but I have about 50MB of my document files and would be fine for online transfer...if we think people can download IE5.5 standard then they can move a few megabytes of user data via modem.

Anyway. .with the current tool here's some comments I have...and yes I know this migration stuff in general is actually a very hard problem. (Well maybe not top 10 items, but I was in a Letterman mood.)

- 1) Need a **cooler** name...migration is techy...follow Mac rules...this is "Moving Company" feature. Think people understand moving into a home and moving to a new computer should be the same.
- 2) **Should be top level item on the start menu for a retail install.**
- 3) If running migwiz from floppy should default to Original machine option...or use a flag on Whistler version so it's default is set to New machine and have code always default to original machine option.
- 4) If wizard is going to create many floppies then should estimate how many up front. Do people really own many floppies anymore?
- 5) If connected to the net offer email or xdrive type online storage transfer. Please!!!

1

MS-CC-Sun 000001382804  
HIGHLY CONFIDENTIAL

- 6) Need more pictures in the wizard when taking about the two systems. The destination or new PC should have the Whistler logo near it...cool...and also makes it clear.
- 7) In transfer method should default to a C:\MyData folder...or C:\Moving folder.
- 8) The proceed with transfer screen is confusing. Unclear when to remove the disk...now or after next?
- 9) The a:\migwiz thing is pretty ugly...a shame autorun doesn't work on floppies...you might try to trick Windows though and call the item setup.exe on the migration floppy to have the client auto start it or at least use add/remove programs path.
- 10) When I cancel the wizard it says it's undoing changes to my client/source system...scary...what changes would migration do to the source machine?

Also the process failed on my system when I switched disks early...should be able to identify disks or get customer back to wizard prog disk if needed. Also failed when I used a local drive for the files...said disk was corrupted then too. Doing just a settings floppy worked fine.

FYI status on Whistler given to Bill.

We need to get hardcore about proving we can do a good retail upgrade here.

Dave

**Cc:** Chris Jones  
**Subject:** Notes from Whistler Client Checkpoint w/ BillG

JoeB, BrianV, IainMc, JohnFre, and I reviewed the Whistler Client plan with BillG last week. Purpose was just to update Bill on Whistler and what we are doing, focusing on key features, and find out where he had questions and feedback.

#### Slides

<< File: billg whistler introduction (final).ppt >>

#### Overall

- Bill is excited about Whistler. Thinks it will be a great product and that we can get bang out of it. JoeB gave a terrific demo of some end to end experiences.
- Really liked fast user switching, thinks this will be a great feature.
- Worried about retail upgrade. If we think retail upgrade won't be great, wants us to think about how to go for more of a quality push.
- Performance is embarrassing. We can ship Beta 1 but we should slip RTM until it is good. Shows lack of process, discipline on the team.
- Need more Personal/Pro split. Should be more aggressive here.

#### Follow Up Meetings

I will work to set these up:

- 1) Brand/Pricing. We need to close on our proposal for this, including what we think we should do around retail upgrade, personal/pro split, OEM pricing, etc. This should be a meeting with SteveB and BillG, and probably JoachimK. (johnfre to drive)
- 2) Windows Eco-System. Bill wanted to understand what we are going to do around driver quality vs coverage, and how we are going to lead in creating a higher quality version of Windows including 3rd party software. (chrisjo)
- 3) Windows.NET. To close on two issues: (a) what do we do in Whistler, and (b) what is our long term view? DaveHe should be there. (chrisjo)

## Other Action Items

Please send me an update on these by Friday if possible, and I will roll up into a mail to Bill.

- Email/Internet configuration. Bill mentioned how hard it is to set your default mail client to outlook/oe. We should look and see if we can make this brain dead simple, are we doing enough? **(debweiss)**
- Desktop population. Bill was worried that we were removing stuff off the desktop that customers and Microsoft will want on there. Need to track this w/ OEM. **(debweiss)**
- Group by feature for CD's, why not for FTP? Rashid suggested we look at this feature for FTP and HTTP folders, or anyplace where there is latency in the copy. **(debweiss)**
- IE code download. We should make this better. For media types, we should default to the right folders and not ask Open/Save As. For signed stuff by Microsoft, should be easy to say "accept" and sniff the signature. not get the Open/Save As. Just needs work. **(ramezn)**
- File associations. Why not run a referral service on Windows Update for downloading the apps? **(eugeneh)**
- Public machine case for Whistler. Follow up w/ the Gates Foundation. Are there simple things we could do to make this better? **(ainmc)**
- MPG2 upgrade. Bill suggested we update users who we detect already have an MPG2 license to a decoder. He thought we could get from Intel. **(dennisfl)**
- Office Watson vs PC Health. Are we using the same infrastructure? **(debbl)**
- Search Companion. We should get together with BillBI to see if we agree on this. If not, a topic for our .NET meeting. **(joeb)**
- Firewall. Bill had questions about how this works. Can you share files over the firewall? What does it protect and what doesn't it? **(jawadk)**
- User manager. We should think about what we can do (short and long term) to integrate the concept of buddies into the shell/Windows. Why can't I share files w/ my buddies? Add my buddies easily to logon? See my buddies shares? **(joeb)**
- USB 2.0. Wants to know why this won't be done. Thinks it will be a big deal for Intel. **(roberti, follow up mail already sent)**
- Phoenix. Wants an update. **(jawadk)**
- Passport for logon. Disappointed we won't allow this, would like to know details. **(debweiss)**
- Games. Need to get status on where we are, both for internal Microsoft apps and external. Focus on new titles released post Windows 2000 RTM. **(chanv to work w/ app compat team, robbieb on this)**

## My Notes

Just follow up with me on these, not specific questions Bill had.

- Why aren't the view changes (e.g. change from thumbnail to filmstrip) in the webview pane? **(debweiss)**
- Why don't we default to a nice action for CD insert, HW insert, etc, with a nice UI that gives you other options? One way to do this would be to open up a folder with the commands in the left pane of the webview. another would be to have some pop up that says "Playing CD, click here for more options." Related to this, need more feedback on hardware insert (should say something is happening) Also, we should make sure this isn't something ISV's and IHV's can spam (user must have control). **(joeb, follow up mail already sent)**
