Font file preload amite
Cleanup font cache code gunterz
Finish remove gbl lock kensy, davidw, amite
Complete Fontmapper work davidw

Other Critical Work

Bambi in build 50 philba

p.s. By now, everyone should have seen rickem's mail regarding PUCUS. We'll need to spend some time today fixing our source tree after Friday's crash.

It's pretty clear we need to make sure Windows 3.1 only runs on top of MS DOS or an OEM version of it.

Privileged material redacted

However, we should surely crash at some point shortly later.

Now to the point of this mail. How shall we proceed on the issue of making sure Win 3.1 requires MS DOS. We need to have some pretty fancy internal checks to make sure we are on the right one. Maybe there are several very sophisticated checks so the competitors get put on a treadmill. Aaron had some pretty wild ideas after 3 or so beers, earle has some too. We need to make sure this doesn't distract the team for a couple of reasons 1) the pure distraction factor 2) the less people know about exactly what gets done, the better.

Please advise.

This is a good guy whom I know who works at Motorola Mobile Data in Bothell. He is a D12/D13 developer/development manager - smart and lots of energy.

He is tired of "six sigma" bureaucracy at Motorola, and fact that Moto as a company is strapped for cash to invest in its products - so he is looking at offers from Slate and Rational in the Bay Area. He wants however to stay in this area.

He could fit a number of different slots:

- we should get someone from the NT and DOS/Win groups to interview him
- we should offer to let someone from Langs interview him (he has worked on compilers and tools before)
- we should let nathanm look at him for FAX project (he knows some of this stuff from Moto Mobile Data work).

He is going to call Kayb, can you work let Kayb know whom you would like to work with him? thx.
