Critical Updates **Windows Update**

You can automatically learn when a new update is available for your computer by downloading the Critical Update Notification from the [Microsoft² Windows² Update Web site](#). After you download Critical Update Notification, Windows Update notifies you when a new essential update is available for your computer when you connect to the Internet. Critical Update Notification keeps your computer up-to-date and protected from potential security issues affecting Microsoft Windows

To install Critical Update Notification go to the [Windows Update Web site](#).

1. On the Windows Update site, click **Product Update** in the left-hand navigation.
2. In the dialog box that asks whether you want Windows Update to check to see which components are installed on your computer click **yes**. Windows Update then generates a catalog of recommended updates.
3. Scroll down through the list of updates and look for Windows Critical Update Notification. Click **Read This First** and read more about Critical Update Notification.
4. If you decide you want Critical Update Notification, click the **box** next to Windows Critical Update Notification, and then click the **Download** arrow in the upper right-hand corner.

Go to [Windows Update](#) now to begin.
