### Comments: Problems with DR.Dos 6 on Copam computers

Hello Tony, how are you?

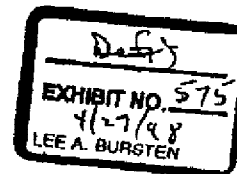

We have some problems with Dr dos and some Copam computers. It is not possible for us to get any answers from the Norwegian distributor, therefore I have to ask you for help.

The problem is that our computers need some parameters for high memory definition. In MS-dos we need to use the parameters himem.sys/M:5 and M:1.  
What can we use in DR dos to compensate this demand.  
Is there any new versions of DR.dos 6, if it is please send us some updates.

Please answer as fast as possible, the customers are complaining

Best regards  
DATAVAREHUSET A/S
